

# **Dnmt1 Antibody (Center S714) Blocking Peptide**

Synthetic peptide Catalog # BP17415c

## **Specification**

## **Dnmt1 Antibody (Center S714) Blocking Peptide - Product Information**

**Primary Accession** 

P26358

# Dnmt1 Antibody (Center S714) Blocking Peptide - Additional Information

**Gene ID 1786** 

#### **Other Names**

DNA (cytosine-5)-methyltransferase 1, Dnmt1, CXXC-type zinc finger protein 9, DNA methyltransferase Hsal, DNA MTase Hsal, MHsal, MCMT, DNMT1, AIM, CXXC9, DNMT

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

## **Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

## Dnmt1 Antibody (Center S714) Blocking Peptide - Protein Information

Name DNMT1

Synonyms AIM, CXXC9, DNMT

### **Function**

Methylates CpG residues. Preferentially methylates hemimethylated DNA. Associates with DNA replication sites in S phase maintaining the methylation pattern in the newly synthesized strand, that is essential for epigenetic inheritance. Associates with chromatin during G2 and M phases to maintain DNA methylation independently of replication. It is responsible for maintaining methylation patterns established in development. DNA methylation is coordinated with methylation of histones. Mediates transcriptional repression by direct binding to HDAC2. In association with DNMT3B and via the recruitment of CTCFL/BORIS, involved in activation of BAG1 gene expression by modulating dimethylation of promoter histone H3 at H3K4 and H3K9. Probably forms a corepressor complex required for activated KRAS- mediated promoter hypermethylation and transcriptional silencing of tumor suppressor genes (TSGs) or other tumor-related genes in colorectal cancer (CRC) cells (PubMed:<a href="http://www.uniprot.org/citations/24623306" target="blank">24623306</a>). Also required to maintain a transcriptionally repressive state of genes in undifferentiated embryonic stem cells (ESCs) (PubMed:<a href="http://www.uniprot.org/citations/24623306" target="blank">24623306</a>). Associates at href="http://www.uniprot.org/citations/24623306" target="blank">24623306</a>). Associates at

href="http://www.uniprot.org/citations/24623306" target="\_blank">24623306</a>). Associates at promoter regions of tumor suppressor genes (TSGs) leading to their gene silencing (PubMed:<a

href="http://www.uniprot.org/citations/24623306" target="\_blank">24623306</a>). Promotes tumor growth (PubMed:<a href="http://www.uniprot.org/citations/24623306" target=" blank">24623306</a>).

### **Cellular Location**

Nucleus. Note=Localized to the perinucleolar region.

#### **Tissue Location**

Ubiquitous; highly expressed in fetal tissues, heart, kidney, placenta, peripheral blood mononuclear cells, and expressed at lower levels in spleen, lung, brain, small intestine, colon, liver, and skeletal muscle. Isoform 2 is less expressed than isoform 1.

# **Dnmt1 Antibody (Center S714) Blocking Peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.

# Dnmt1 Antibody (Center S714) Blocking Peptide - Background

DNA (cytosine-5-)-methyltransferase 1 has a role in theestablishment and regulation of tissue-specific patterns ofmethylated cytosine residues. Aberrant methylation patterns areassociated with certain human tumors and developmentalabnormalities. Two transcript variants encoding different isoformshave been found for this gene.
