

PLCD4 Antibody (C-term) Blocking Peptide

Synthetic peptide Catalog # BP17424b

Specification

PLCD4 Antibody (C-term) Blocking Peptide - Product Information

Primary Accession

Q9BRC7

PLCD4 Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 84812

Other Names

1-phosphatidylinositol 4, 5-bisphosphate phosphodiesterase delta-4, hPLCD4, Phosphoinositide phospholipase C-delta-4, Phospholipase C-delta-4, PLCD4

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

PLCD4 Antibody (C-term) Blocking Peptide - Protein Information

Name PLCD4 (HGNC:9062)

Function

Hydrolyzes the phosphatidylinositol 4,5-bisphosphate (PIP2) to generate 2 second messenger molecules diacylglycerol (DAG) and inositol 1,4,5-trisphosphate (IP3). DAG mediates the activation of protein kinase C (PKC), while IP3 releases Ca(2+) from intracellular stores. Required for acrosome reaction in sperm during fertilization, probably by acting as an important enzyme for intracellular Ca(2+) mobilization in the zona pellucida-induced acrosome reaction. May play a role in cell growth. Modulates the liver regeneration in cooperation with nuclear PKC. Overexpression up-regulates the Erk signaling pathway and proliferation.

Cellular Location

Membrane; Peripheral membrane protein. Nucleus. Cytoplasm. Endoplasmic reticulum Note=Localizes primarily to intracellular membranes mostly to the endoplasmic reticulum

Tissue Location

Highly expressed in skeletal muscle and kidney tissues, and at moderate level in intestinal tissue. Expressed in corneal epithelial cells.

PLCD4 Antibody (C-term) Blocking Peptide - Background

Phosphatidylinositol-specific phospholipase C (PLC) playsan important role in receptor-mediated signal transduction bygenerating 2 second messenger molecules, inositol1,4,5-triphosphate (IP3) and diacylglycerol, fromphosphatidylinositol 4,5-bisphosphate (PIP2). PLC comprises adiverse family of enzymes that differ in structure and tissuedistribution (Berridge, 1993 [PubMed 8381210]).
