

PCDHA2 Antibody (N-term) Blocking Peptide Synthetic peptide

Catalog # BP18218a

Specification

PCDHA2 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession

<u>Q9Y5H9</u>

PCDHA2 Antibody (N-term) Blocking Peptide - Additional Information

Gene ID 56146

Other Names Protocadherin alpha-2, PCDH-alpha-2, PCDHA2

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions This product is for research use only. Not for use in diagnostic or therapeutic procedures.

PCDHA2 Antibody (N-term) Blocking Peptide - Protein Information

Name PCDHA2

Function Potential calcium-dependent cell-adhesion protein. May be involved in the establishment and maintenance of specific neuronal connections in the brain.

Cellular Location Cell membrane; Single-pass type I membrane protein

PCDHA2 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

PCDHA2 Antibody (N-term) Blocking Peptide - Background

This gene is a member of the protocadherin alpha genecluster, one of three related gene clusters

tandemly linked onchromosome five that demonstrate an unusual genomic organizationsimilar to that of B-cell and T-cell receptor gene clusters. Thealpha gene cluster is composed of 15 cadherin superfamily genesrelated to the mouse CNR genes and consists of 13 highly similarand 2 more distantly related coding sequences. The tandem array of15 N-terminal exons, or variable exons, are followed by downstreamC-terminal exons, or constant exons, which are shared by all genesin the cluster. The large, uninterrupted N-terminal exons eachencode six cadherin ectodomains while the C-terminal exons encode the cytoplasmic domain. These neural cadherin-like cell adhesionproteins are integral plasma membrane proteins that most likelyplay a critical role in the establishment and function of specificcell-cell connections in the brain. Alternative splicing has beenobserved and additional variants have been suggested but theirfull-length nature has yet to be determined.
