

LRRC16A Antibody (C-term) Blocking Peptide
Synthetic peptide
Catalog # BP18234b**Specification**

LRRC16A Antibody (C-term) Blocking Peptide - Product InformationPrimary Accession [Q5VZK9](#)**LRRC16A Antibody (C-term) Blocking Peptide - Additional Information****Gene ID** 55604**Other Names**

Leucine-rich repeat-containing protein 16A, CARMIL homolog, LRRC16A, CARMIL, CARMIL1a, LRRC16

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

LRRC16A Antibody (C-term) Blocking Peptide - Protein Information**Name** CARMIL1 {ECO:0000303|PubMed:16054028, ECO:0000312|HGNC:HGNC:21581}**Function**

Cell membrane-cytoskeleton-associated protein that plays a role in the regulation of actin polymerization at the barbed end of actin filaments. Prevents F-actin heterodimeric capping protein (CP) activity at the leading edges of migrating cells, and hence generates uncapped barbed ends and enhances actin polymerization, however, seems unable to nucleate filaments (PubMed:16054028). Plays a role in lamellipodial protrusion formations and cell migration (PubMed:19846667).

Cellular Location

Cytoplasm. Cytoplasm, cytoskeleton {ECO:0000250|UniProtKB:Q6EDY6}. Cell membrane. Cell projection, lamellipodium. Note=Found on macropinosomes (PubMed:19846667). Colocalized with heterodimeric capping protein (CP) and F-actin in lamellipodia but not with F-actin in stress fibers (PubMed:19846667).

Tissue Location

Expressed in lung, placenta, small intestine, liver, thymus, colon, skeletal muscle, heart and brain. Higher expression in kidney.

LRRC16A Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

LRRC16A Antibody (C-term) Blocking Peptide - Background

LRRC16A binds CAPZA2 with high affinity and significantly decreases CAPZA2 affinity for actin barbed ends. Increases the rate of elongation from seeds in the presence of CAPZA2, however, seems unable to nucleate filaments. Rapidly uncaps barbed ends capped by CAPZA2 and enhances barbed-end actin polymerization (By similarity).
