

DPH2 Antibody (N-term) Blocking Peptide Synthetic peptide

Catalog # BP18264a

Specification

DPH2 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession

<u>Q9BQC3</u>

DPH2 Antibody (N-term) Blocking Peptide - Additional Information

Gene ID 1802

Other Names

Diphthamide biosynthesis protein 2, DPH2 homolog, HsDph2, Diphthamide biosynthesis protein 2 homolog-like 2, DPH2-like 2, DPH2, DPH2L2

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions This product is for research use only. Not for use in diagnostic or therapeutic procedures.

DPH2 Antibody (N-term) Blocking Peptide - Protein Information

Name DPH2

Synonyms DPH2L2

Function

Required for the first step of diphthamide biosynthesis, a post-translational modification of histidine which occurs in elongation factor 2 (PubMed:32576952). DPH1 and DPH2 transfer a 3-amino-3- carboxypropyl (ACP) group from S-adenosyl-L-methionine (SAM) to a histidine residue, the reaction is assisted by a reduction system comprising DPH3 and a NADH-dependent reductase (By similarity). Facilitates the reduction of the catalytic iron-sulfur cluster found in the DPH1 subunit (By similarity).

Tissue Location

Strongly expressed in skeletal muscle. Moderately expressed in heart, small intestine, liver, pancreas, testis and colon Weakly expressed in brain, placenta, kidney, spleen, thymus, prostate, ovary and lymphocytes.

DPH2 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

DPH2 Antibody (N-term) Blocking Peptide - Background

This gene is one of two human genes similar to the yeastgene dph2. The yeast gene was identified by its ability tocomplement a diphthamide mutant strain, and thus probably functions in diphthamide biosynthesis. Diphthamide is a post-translationallymodified histidine residue present in elongation factor 2 (EF2)that is the target of diphtheria toxin ADP-ribosylation. Twotranscript variants encoding different isoforms have been found forthis gene.
