

## GCLC Antibody (Center) Blocking Peptide

Synthetic peptide Catalog # BP18483c

### **Specification**

## GCLC Antibody (Center) Blocking Peptide - Product Information

**Primary Accession** 

P48506

## GCLC Antibody (Center) Blocking Peptide - Additional Information

**Gene ID 2729** 

#### **Other Names**

Glutamate--cysteine ligase catalytic subunit, GCS heavy chain, Gamma-ECS, Gamma-glutamylcysteine synthetase, GCLC, GLCL, GLCLC

# **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

### **Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

### GCLC Antibody (Center) Blocking Peptide - Protein Information

Name GCLC (HGNC:4311)

Synonyms GLCL, GLCLC

### **Function**

Catalyzes the ATP-dependent ligation of L-glutamate and L- cysteine and participates in the first and rate-limiting step in glutathione biosynthesis.

## GCLC Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

# GCLC Antibody (Center) Blocking Peptide - Background

Glutamate-cysteine ligase, also known asgamma-glutamylcysteine synthetase is the first

rate-limiting enzymeof glutathione synthesis. The enzyme consists of two subunits, aheavy catalytic subunit and a light regulatory subunit. This locusencodes the catalytic subunit, while the regulatory subunit isderived from a different gene located on chromosome 1p22-p21. Mutations at this locus have been associated with hemolytic anemiadue to deficiency of gamma-glutamylcysteine synthetase and susceptibility to myocardial infarction.
