

HAS3 Antibody (Center) Blocking Peptide

Synthetic peptide Catalog # BP18700c

Specification

HAS3 Antibody (Center) Blocking Peptide - Product Information

Primary Accession

000219

HAS3 Antibody (Center) Blocking Peptide - Additional Information

Gene ID 3038

Other Names

Hyaluronan synthase 3, Hyaluronate synthase 3, Hyaluronic acid synthase 3, HA synthase 3, HAS3

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

HAS3 Antibody (Center) Blocking Peptide - Protein Information

Name HAS3 (HGNC:4820)

Function

Catalyzes the addition of GlcNAc or GlcUA monosaccharides to the nascent hyaluronan polymer. Therefore, it is essential to hyaluronan synthesis a major component of most extracellular matrices that has a structural role in tissues architectures and regulates cell adhesion, migration and differentiation. This is one of three isoenzymes responsible for cellular hyaluronan synthesis.

Cellular Location

Cell membrane; Multi-pass membrane protein. Golgi apparatus membrane; Multi-pass membrane protein. Golgi apparatus, trans-Golgi network membrane {ECO:0000250|UniProtKB:008650}; Multi-pass membrane protein. Early endosome. Note=Travels from endoplasmic reticulum (ER), Golgi to plasma membrane (PubMed:26883802). Actives only when present in plasma membrane (By similarity). O-GlcNAcylation controls its membrane localization (PubMed:26883802). A rapid recycling of HAS3 between plasma membrane and endosomes is controlled by the cytosolic levels of UDP-GlcUA and UDP-GlcNAc (PubMed:26883802) {ECO:0000250|UniProtKB:008650, ECO:0000269|PubMed:26883802}

HAS3 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

HAS3 Antibody (Center) Blocking Peptide - Background

The protein encoded by this gene is involved in thesynthesis of the unbranched glycosaminoglycan hyaluronan, orhyaluronic acid, which is a major constituent of the extracellularmatrix. This gene is a member of the NODC/HAS gene family. Compared to the proteins encoded by other members of this gene family, thisprotein appears to be more of a regulator of hyaluronan synthesis. Alternative splicing results in multiple transcript variants.
