

PPP1R9A Antibody (Center) Blocking Peptide
Synthetic peptide
Catalog # BP18808c

Specification

PPP1R9A Antibody (Center) Blocking Peptide - Product Information

Primary Accession [Q9ULJ8](#)

PPP1R9A Antibody (Center) Blocking Peptide - Additional Information

Gene ID 55607

Other Names

Neurabin-1, Neurabin-I, Neural tissue-specific F-actin-binding protein I, Protein phosphatase 1 regulatory subunit 9A, PPP1R9A, KIAA1222

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

PPP1R9A Antibody (Center) Blocking Peptide - Protein Information

Name PPP1R9A

Synonyms KIAA1222

Function

Binds to actin filaments (F-actin) and shows cross-linking activity. Binds along the sides of the F-actin. May be involved in neurite formation. Inhibits protein phosphatase 1-alpha activity (By similarity).

Cellular Location

Cytoplasm, cytoskeleton. Synapse, synaptosome

PPP1R9A Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

PPP1R9A Antibody (Center) Blocking Peptide - Background

This gene is imprinted, and located in a cluster of imprinted genes on chromosome 7q12. This gene is transcribed in both neuronal and multiple embryonic tissues, and it is maternally expressed mainly in embryonic skeletal muscle tissues and biallelically expressed in other embryonic tissues. The protein encoded by this gene includes a PDZ domain and a sterile alpha motif (SAM). It is a regulatory subunit of protein phosphatase I, and controls actin cytoskeleton reorganization. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
