

### SLC6A1 Antibody (N-term) Blocking Peptide

Synthetic peptide Catalog # BP19005a

#### **Specification**

### SLC6A1 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession

P30531

# SLC6A1 Antibody (N-term) Blocking Peptide - Additional Information

**Gene ID 6529** 

#### **Other Names**

Sodium- and chloride-dependent GABA transporter 1, GAT-1, Solute carrier family 6 member 1, SLC6A1, GABATR, GABT1, GAT1

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### **Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

### SLC6A1 Antibody (N-term) Blocking Peptide - Protein Information

Name SLC6A1

Synonyms GABATR, GABT1, GAT1

#### **Function**

Mediates transport of gamma-aminobutyric acid (GABA) together with sodium and chloride and is responsible for the reuptake of GABA from the synapse (PubMed:<a href="http://www.uniprot.org/citations/30132828" target="\_blank">30132828</a>). The translocation of GABA, however, may also occur in the reverse direction leading to the release of GABA (By similarity). The direction and magnitude of GABA transport is a consequence of the prevailing thermodynamic conditions, determined by membrane potential and the intracellular and extracellular concentrations of Na(+), Cl(-) and GABA (By similarity). Can also mediate sodiumand chloride-dependent transport of hypotaurine but to a much lower extent as compared to GABA (By similarity).

#### **Cellular Location**

Cell membrane {ECO:0000250|UniProtKB:P23978}; Multi-pass membrane protein. Presynapse {ECO:0000250|UniProtKB:P31648}. Note=Localized at the presynaptic terminals of interneurons. {ECO:0000250|UniProtKB:P31648}

# SLC6A1 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

#### SLC6A1 Antibody (N-term) Blocking Peptide - Background

The SLC6A1 gene encodes a gamma-aminobutyric acid (GABA)transporter, which removes GABA from the synaptic cleft (Hirunsatitet al., 2009 [PubMed 19077666]).
