

### RPL10 Antibody (N-term) Blocking Peptide

Synthetic peptide Catalog # BP19053a

### **Specification**

#### RPL10 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession

P27635

### RPL10 Antibody (N-term) Blocking Peptide - Additional Information

**Gene ID 6134** 

#### **Other Names**

60S ribosomal protein L10, Laminin receptor homolog, Protein QM, Tumor suppressor QM, RPL10, DXS648E, QM

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### **Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

### RPL10 Antibody (N-term) Blocking Peptide - Protein Information

Name RPL10 (HGNC:10298)

Synonyms DXS648E, QM

## **Function**

Component of the large ribosomal subunit (PubMed: <a

href="http://www.uniprot.org/citations/26290468" target="\_blank">26290468</a>). Plays a role in the formation of actively translating ribosomes (PubMed:<a

href="http://www.uniprot.org/citations/26290468" target="\_blank">26290468</a>). May play a role in the embryonic brain development (PubMed:<a

href="http://www.uniprot.org/citations/25316788" target="\_blank">25316788</a>).

#### **Cellular Location**

Cytoplasm {ECO:0000250|UniProtKB:Q6ZWV3}.

### RPL10 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

# Blocking Peptides

# RPL10 Antibody (N-term) Blocking Peptide - Background

Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and a large 60S subunit. Togetherthese subunits are composed of 4 RNA species and approximately 80structurally distinct proteins. This gene encodes a ribosomal protein that is a component of the 60S subunit. The protein belongsto the L10E family of ribosomal proteins. It is located in thecytoplasm. In vitro studies have shown that the chicken protein canbind to c-Jun and can repress c-Jun-mediated transcriptionalactivation, but these activities have not been demonstrated invivo. This gene was initially identified as a candidate for a Wilmstumor suppressor gene, but later studies determined that this geneis not involved in the suppression of Wilms tumor. This gene hasbeen referred to as 'laminin receptor homolog' because a chimerictranscript consisting of sequence from this gene and sequence fromthe laminin receptor gene was isolated; however, it is not believedthat this gene encodes a laminin receptor. Transcript variantsutilizing alternative polyA signals exist. The variant with thelongest 3' UTR overlaps the deoxyribonuclease I-like 1 gene on theopposite strand. This gene is co-transcribed with the smallnucleolar RNA gene U70, which is located in its fifth intron. As istypical for genes encoding ribosomal proteins, there are multipleprocessed pseudogenes of this gene dispersed through the genome.
