

MRPL24 Antibody (C-term) Blocking Peptide Synthetic peptide

Catalog # BP1940b

Specification

MRPL24 Antibody (C-term) Blocking Peptide - Product Information

Primary Accession

<u>Q96A35</u>

MRPL24 Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 79590

Other Names 39S ribosomal protein L24, mitochondrial, L24mt, MRP-L24, MRPL24

Target/Specificity

The synthetic peptide sequence used to generate the antibody AP1940b was selected from the C-term region of human MRPL24. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions This product is for research use only. Not for use in diagnostic or therapeutic procedures.

MRPL24 Antibody (C-term) Blocking Peptide - Protein Information

Name MRPL24

Cellular Location Mitochondrion

MRPL24 Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

MRPL24 Antibody (C-term) Blocking Peptide - Background

Mammalian mitochondrial ribosomal proteins are encoded by nuclear genes and help in protein synthesis within the mitochondrion. Mitochondrial ribosomes (mitoribosomes) consist of a small 28S subunit and a large 39S subunit. They have an estimated 75% protein to rRNA composition compared to prokaryotic ribosomes, where this ratio is reversed. Another difference between mammalian mitoribosomes and prokaryotic ribosomes is that the latter contain a 5S rRNA. Among different species, the proteins comprising the mitoribosome differ greatly in sequence, and sometimes in biochemical properties, which prevents easy recognition by sequence homology. MRPL24 is a 39S subunit protein which is more than twice the size of its E.coli counterpart (EcoL24).
