

RPC5 Antibody (N-term) Blocking Peptide
Synthetic peptide
Catalog # BP1956a**Specification**

RPC5 Antibody (N-term) Blocking Peptide - Product InformationPrimary Accession [Q9NVU0](#)**RPC5 Antibody (N-term) Blocking Peptide - Additional Information**

Gene ID 55718

Other Names

DNA-directed RNA polymerase III subunit RPC5, RNA polymerase III subunit C5, DNA-directed RNA polymerase III 80 kDa polypeptide, POLR3E, KIAA1452

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP1956a](/product/products/AP1956a) was selected from the N-term region of human RPC5. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

RPC5 Antibody (N-term) Blocking Peptide - Protein InformationName POLR3E ([HGNC:30347](#))

Synonyms KIAA1452

Function

DNA-dependent RNA polymerase catalyzes the transcription of DNA into RNA using the four ribonucleoside triphosphates as substrates (PubMed: [20413673](http://www.uniprot.org/citations/20413673), PubMed: [12391170](http://www.uniprot.org/citations/12391170), PubMed: [35637192](http://www.uniprot.org/citations/35637192)). Specific peripheric component of RNA polymerase III (Pol III) which synthesizes small non-coding RNAs including 5S rRNA, snRNAs, tRNAs and miRNAs from at least 500 distinct genomic loci. Assembles with POLR3D/RPC4 forming a subcomplex that binds the Pol III core. Enables recruitment of Pol III at transcription initiation site and drives transcription initiation from both type 2 and type 3 DNA

promoters. Required for efficient transcription termination and reinitiation (PubMed:20413673, PubMed:12391170, PubMed:35637192) (By similarity). Plays a key role in sensing and limiting infection by intracellular bacteria and DNA viruses. Acts as a nuclear and cytosolic DNA sensor involved in innate immune response. Can sense non-self dsDNA that serves as template for transcription into dsRNA. The non-self RNA polymerase III transcripts, such as Epstein-Barr virus-encoded RNAs (EBERs) induce type I interferon and NF-kappa-B through the RIG-I pathway (PubMed:19609254, PubMed:19631370).

Cellular Location

Nucleus.

RPC5 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Blocking Peptides](#)

RPC5 Antibody (N-term) Blocking Peptide - Images**RPC5 Antibody (N-term) Blocking Peptide - Background**

RNA polymerase III synthesizes RNA components of the protein synthesis, pre-mRNA splicing, and tRNA processing apparatuses. The holoenzyme consists of about 15 different subunits. The RPC5 subunit is essential for efficient transcription from both the type 2 VAI and type 3 U6 RNA polymerase III promoters.
