

SLC6A15 Blocking Peptide (N-term)

Synthetic peptide

Catalog # BP19756a

Specification

SLC6A15 Blocking Peptide (N-term) - Product Information

Primary Accession

[O9H2J7](#)

Other Accession

[NP_877499.1](#)**SLC6A15 Blocking Peptide (N-term) - Additional Information**

Gene ID 55117

Other Names

Sodium-dependent neutral amino acid transporter B(0)AT2, Sodium- and chloride-dependent neurotransmitter transporter NTT73, Sodium-coupled branched-chain amino-acid transporter 1, Solute carrier family 6 member 15, Transporter v7-3, SLC6A15, B0AT2, NTT73, SBAT1

Target/Specificity

The synthetic peptide sequence is selected from aa 4-18 of HUMAN SLC6A15

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

SLC6A15 Blocking Peptide (N-term) - Protein InformationName SLC6A15 ([HGNC:13621](#))**Function**

Functions as a sodium-dependent neutral amino acid transporter. Exhibits preference for the branched-chain amino acids, particularly leucine, valine and isoleucine and methionine. Can also transport low-affinity substrates such as alanine, phenylalanine, glutamine and pipecolic acid. Mediates the saturable, pH-sensitive and electrogenic cotransport of proline and sodium ions with a stoichiometry of 1:1. May have a role as transporter for neurotransmitter precursors into neurons. In contrast to other members of the neurotransmitter transporter family, does not appear to be chloride-dependent.

Cellular Location

Membrane; Multi-pass membrane protein

Tissue Location

Almost exclusively expressed in the brain.

SLC6A15 Blocking Peptide (N-term) - Protocols

Provided below are standard protocols that you may find useful for product applications.

SLC6A15 Blocking Peptide (N-term) - Background

SLC6A15 shows structural characteristics of an Na(+) and Cl(-)-dependent neurotransmitter transporter, including 12 transmembrane (TM) domains, intracellular N and C termini, and large extracellular loops containing multiple N-glycosylation sites (Farmer et al., 2000 [PubMed 11112352]).
