

# **RAB27A Blocking Peptide (C-term)**

Synthetic peptide Catalog # BP20264b

# **Specification**

### RAB27A Blocking Peptide (C-term) - Product Information

Primary Accession Other Accession P51159

Q99P74, Q99P58, P23640, Q4LE85, Q9ERI2,

NP\_004571.2

# RAB27A Blocking Peptide (C-term) - Additional Information

**Gene ID 5873** 

#### **Other Names**

Ras-related protein Rab-27A, Rab-27, GTP-binding protein Ram, RAB27A, RAB27

### **Target/Specificity**

The synthetic peptide sequence is selected from aa 151-164 of HUMAN RAB27A

### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### **Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

# RAB27A Blocking Peptide (C-term) - Protein Information

Name RAB27A

Synonyms RAB27

### **Function**

Small GTPase which cycles between active GTP-bound and inactive GDP-bound states. In its active state, binds to a variety of effector proteins to regulate homeostasis of late endocytic pathway, including endosomal positioning, maturation and secretion (PubMed:<a

href="http://www.uniprot.org/citations/30771381" target="\_blank">30771381</a>). Plays a role in cytotoxic granule exocytosis in lymphocytes. Required for both granule maturation and granule docking and priming at the immunologic synapse.

# **Cellular Location**

Membrane; Lipid-anchor. Melanosome. Late endosome. Lysosome. Note=Identified by mass spectrometry in melanosome fractions from stage I to stage IV (PubMed:12643545, PubMed:17081065). Localizes to endosomal exocytic vesicles (PubMed:17237785).

#### **Tissue Location**

Found in all the examined tissues except in brain. Low expression was found in thymus, kidney, muscle and placenta Detected in melanocytes, and in most tumor cell lines examined Expressed in cytotoxic T-lymphocytes (CTL) and mast cells

# RAB27A Blocking Peptide (C-term) - Protocols

Provided below are standard protocols that you may find useful for product applications.

# • Blocking Peptides

# RAB27A Blocking Peptide (C-term) - Background

The protein encoded by this gene belongs to the small GTPase superfamily, Rab family. The protein is membrane-bound and may be involved in protein transport and small GTPase mediated signal transduction. Mutations in this gene are associated with Griscelli syndrome type 2. Alternative splicing occurs at this locus and four transcript variants encoding the same protein have been identified.
