

### **PAX6 Blocking Peptide (Center)**

Synthetic peptide Catalog # BP20979a

### **Specification**

### **PAX6 Blocking Peptide (Center) - Product Information**

Primary Accession P26367

Other Accession P63015, P26630, Q1LZF1

# PAX6 Blocking Peptide (Center) - Additional Information

**Gene ID** 5080

#### **Other Names**

Paired box protein Pax-6, Aniridia type II protein, Oculorhombin, PAX6, AN2

### Target/Specificity

The synthetic peptide sequence is selected from aa 183-194 of HUMAN PAX6

#### Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

### PAX6 Blocking Peptide (Center) - Protein Information

Name PAX6

Synonyms AN2

#### **Function**

Transcription factor with important functions in the development of the eye, nose, central nervous system and pancreas. Required for the differentiation of pancreatic islet alpha cells (By similarity). Competes with PAX4 in binding to a common element in the glucagon, insulin and somatostatin promoters. Regulates specification of the ventral neuron subtypes by establishing the correct progenitor domains (By similarity). Acts as a transcriptional repressor of NFATC1- mediated gene expression (By similarity).

### **Cellular Location**

Nucleus {ECO:0000250|UniProtKB:P63015}. [Isoform 5a]: Nucleus {ECO:0000250|UniProtKB:P63016}

## **Tissue Location**

[Isoform 1]: Expressed in lymphoblasts.

## **PAX6 Blocking Peptide (Center) - Protocols**

Provided below are standard protocols that you may find useful for product applications.

# PAX6 Blocking Peptide (Center) - Background

Transcription factor with important functions in the development of the eye, nose, central nervous system and pancreas. Required for the differentiation of pancreatic islet alpha cells (By similarity). Competes with PAX4 in binding to a common element in the glucagon, insulin and somatostatin promoters. Regulates specification of the ventral neuron subtypes by establishing the correct progenitor domains (By similarity). Isoform 5a appears to function as a molecular switch that specifies target genes.
