

(DANRE) gpr126 Blocking Peptide (C-term)
Synthetic peptide
Catalog # BP21136a

Specification

(DANRE) gpr126 Blocking Peptide (C-term) - Product Information

Primary Accession [C6KFA3](#)

(DANRE) gpr126 Blocking Peptide (C-term) - Additional Information

Gene ID 561970

Other Names

G-protein coupled receptor 126, gpr126

Target/Specificity

The synthetic peptide sequence is selected from aa 1135-1149 of HUMAN gpr126

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

(DANRE) gpr126 Blocking Peptide (C-term) - Protein Information

Name adgrg6

Synonyms gpr126

Function

G-protein coupled receptor which is activated by type IV collagen, a major constituent of the basement membrane. Couples to G(i)-proteins as well as G(s)-proteins (PubMed:25118328). Essential for normal differentiation of promyelinating Schwann cells and for normal myelination of axons (PubMed:19745155). Also plays a role in inner ear development (PubMed:24067352).

Cellular Location

Cell membrane; Multi-pass membrane protein

Tissue Location

Expressed in Schwann cells of the posterior lateral line nerve and in brain.

(DANRE) gpr126 Blocking Peptide (C-term) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Blocking Peptides](#)

(DANRE) gpr126 Blocking Peptide (C-term) - Images**(DANRE) gpr126 Blocking Peptide (C-term) - Background**

Orphan receptor. Required for normal differentiation of promyelinating Schwann cells and for normal myelination of axons. Signals probably through G-proteins to transiently elevate cAMP levels. Required for normal expression of the transcription factors oct6 and krox20 that are required for Schwann cells to initiate myelination.
