

Phospho-mouse IKKg(S375) Antibody Blocking peptide
Synthetic peptide
Catalog # BP3129a**Specification**

Phospho-mouse IKKg(S375) Antibody Blocking peptide - Product InformationPrimary Accession [O88522](#)**Phospho-mouse IKKg(S375) Antibody Blocking peptide - Additional Information**

Gene ID 16151

Other Names

NF-kappa-B essential modulator, NEMO, Ikb kinase-associated protein 1, IKKAP1, mFIP-3, Inhibitor of nuclear factor kappa-B kinase subunit gamma, I-kappa-B kinase subunit gamma, IKK-gamma, IKKG, Ikb kinase subunit gamma, NF-kappa-B essential modifier, Ikbkg, Nemo

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP3129a](/product/products/AP3129a) was selected from the region of human Mouse Phospho-IKKg-S375. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

Phospho-mouse IKKg(S375) Antibody Blocking peptide - Protein Information

Name Ikbkg

Synonyms Nemo

Function

Regulatory subunit of the IKK core complex which phosphorylates inhibitors of NF-kappa-B thus leading to the dissociation of the inhibitor/NF-kappa-B complex and ultimately the degradation of the inhibitor (PubMed: <http://www.uniprot.org/citations/9927690>). Its binding to scaffolding polyubiquitin plays a key role in IKK activation by multiple signaling receptor pathways. Can recognize and bind both 'Lys- 63'-linked and linear polyubiquitin upon cell stimulation, with a much higher affinity for linear polyubiquitin. Could be implicated in NF- kappa-B-mediated protection from cytokine toxicity. Essential for viral activation of IRF3. Involved in TLR3- and IFIH1-mediated antiviral innate response; this function

requires 'Lys-27'-linked polyubiquitination (By similarity).

Cellular Location

Cytoplasm {ECO:0000250|UniProtKB:Q9Y6K9}. Nucleus {ECO:0000250|UniProtKB:Q9Y6K9}.
Note=Sumoylated NEMO accumulates in the nucleus in response to genotoxic stress
{ECO:0000250|UniProtKB:Q9Y6K9}

Phospho-mouse IKKg(S375) Antibody Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Blocking Peptides](#)

Phospho-mouse IKKg(S375) Antibody Blocking peptide - Images**Phospho-mouse IKKg(S375) Antibody Blocking peptide - Background**

IKKg is a regulatory subunit part of the IKK-signalosome complex activation. It is also considered to be a mediator for TAX activation of NF-kappa-B. Additionally, this protein could be implicated in NF-kappa-B-mediated protection from cytokine toxicity.
