

Phospho-Gab1(Y659) Antibody Blocking peptide
Synthetic peptide
Catalog # BP3302b**Specification**

Phospho-Gab1(Y659) Antibody Blocking peptide - Product InformationPrimary Accession [Q13480](#)**Phospho-Gab1(Y659) Antibody Blocking peptide - Additional Information****Gene ID** 2549**Other Names**

GRB2-associated-binding protein 1, GRB2-associated binder 1, Growth factor receptor bound protein 2-associated protein 1, GAB1

Target/Specificity

The synthetic peptide sequence used to generate the antibody AP3302b was selected from the region of human Phospho-Gab1-Y659. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

Phospho-Gab1(Y659) Antibody Blocking peptide - Protein Information**Name** GAB1**Function**

Adapter protein that plays a role in intracellular signaling cascades triggered by activated receptor-type kinases. Plays a role in FGFR1 signaling. Probably involved in signaling by the epidermal growth factor receptor (EGFR) and the insulin receptor (INSR). Involved in the MET/HGF-signaling pathway (PubMed:29408807).

Phospho-Gab1(Y659) Antibody Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

Phospho-Gab1(Y659) Antibody Blocking peptide - Background

Gab1 is a member of the IRS1-like multisubstrate docking protein family. This protein is an important mediator of branching tubulogenesis and plays a central role in cellular growth response, transformation and apoptosis.
