

Phospho-ATF4-pS245 Blocking Peptide
Synthetic peptide
Catalog # BP3359a**Specification**

Phospho-ATF4-pS245 Blocking Peptide - Product Information

Primary Accession [O96A03](#)
Other Accession [P18848](#)

Phospho-ATF4-pS245 Blocking Peptide - Additional Information**Other Names**

Tax-responsive enhancer element B67; ATF4 protein

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

Phospho-ATF4-pS245 Blocking Peptide - Protein Information**Phospho-ATF4-pS245 Blocking Peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.

Phospho-ATF4-pS245 Blocking Peptide - Images**Phospho-ATF4-pS245 Blocking Peptide - Background**

This gene encodes a transcription factor that was originally identified as a widely expressed mammalian DNA binding protein that could bind a tax-responsive enhancer element in the LTR of HTLV-1. The encoded protein was also isolated and characterized as the cAMP-response element binding protein 2 (CREB-2). The protein encoded by this gene belongs to a family of DNA-binding proteins that includes the AP-1 family of transcription factors, cAMP-response element binding proteins (CREBs) and CREB-like proteins. These transcription factors share a leucine zipper region that is involved in protein-protein interactions, located C-terminal to a stretch of basic amino acids that functions as a DNA binding domain. Two alternative transcripts encoding the same protein have been described. Two pseudogenes are located on the X chromosome at q28 in a region containing a large inverted duplication.
