

**Presenilin 2 (PSEN2) Antibody (N-term) Blocking peptide**  
**Synthetic peptide**  
**Catalog # BP6232a****Specification**

---

**Presenilin 2 (PSEN2) Antibody (N-term) Blocking peptide - Product Information**Primary Accession [P49810](#)**Presenilin 2 (PSEN2) Antibody (N-term) Blocking peptide - Additional Information****Gene ID** 5664**Other Names**

Presenilin-2, PS-2, 3423-, AD3LP, AD5, E5-1, STM-2, Presenilin-2 NTF subunit, Presenilin-2 CTF subunit, PSEN2, AD4, PS2, PSNL2, STM2

**Target/Specificity**

The synthetic peptide sequence used to generate the antibody [AP6232a](/product/products/AP6232a) was selected from the N-term region of human PSEN2. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

**Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**Presenilin 2 (PSEN2) Antibody (N-term) Blocking peptide - Protein Information****Name** PSEN2**Synonyms** AD4, PS2, PSNL2, STM2**Function**

Probable catalytic subunit of the gamma-secretase complex, an endoprotease complex that catalyzes the intramembrane cleavage of integral membrane proteins such as Notch receptors and APP (amyloid- beta precursor protein). Requires the other members of the gamma-secretase complex to have a protease activity. May play a role in intracellular signaling and gene expression or in linking chromatin to the nuclear membrane. May function in the cytoplasmic partitioning of proteins. The holoprotein functions as a calcium-leak channel that allows the passive movement of calcium from endoplasmic reticulum to cytosol and is involved in calcium homeostasis (PubMed: [16959576](http://www.uniprot.org/citations/16959576)). Is a regulator of mitochondrion-endoplasmic reticulum membrane tethering and modulates calcium ions

shuttling between ER and mitochondria (PubMed:<a href="http://www.uniprot.org/citations/21285369" target="\_blank">21285369</a>).

**Cellular Location**

Endoplasmic reticulum membrane; Multi-pass membrane protein. Golgi apparatus membrane; Multi-pass membrane protein

**Tissue Location**

Isoform 1 is seen in the placenta, skeletal muscle and heart while isoform 2 is seen in the heart, brain, placenta, liver, skeletal muscle and kidney.

**Presenilin 2 (PSEN2) Antibody (N-term) Blocking peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.

**Presenilin 2 (PSEN2) Antibody (N-term) Blocking peptide - Images****Presenilin 2 (PSEN2) Antibody (N-term) Blocking peptide - Background**

Alzheimer's disease (AD) patients with an inherited form of the disease carry mutations in the presenilin proteins (PSEN1; PSEN2) or the amyloid precursor protein (APP). These disease-linked mutations result in increased production of the longer form of amyloid-beta (main component of amyloid deposits found in AD brains). Presenilins are postulated to regulate APP processing through their effects on gamma-secretase, an enzyme that cleaves APP. Also, it is thought that the presenilins are involved in the cleavage of the Notch receptor, such that that they either directly regulate gamma-secretase activity or themselves are protease enzymes.
