

**ATF4 Antibody (S245) Blocking Peptide**  
**Synthetic peptide**  
**Catalog # BP6287a****Specification**

---

**ATF4 Antibody (S245) Blocking Peptide - Product Information**

Primary Accession [Q96AQ3](#)

**ATF4 Antibody (S245) Blocking Peptide - Additional Information****Target/Specificity**

The synthetic peptide sequence used to generate the antibody [AP6287a](/product/products/AP6287a) was selected from the S245 region of human ATF4. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

**Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**ATF4 Antibody (S245) Blocking Peptide - Protein Information****ATF4 Antibody (S245) Blocking Peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.

ATF4 is a transcription factor that was originally identified as a widely expressed mammalian DNA binding protein that could bind a tax-responsive enhancer element in the LTR of HTLV-1. The encoded protein was also isolated and characterized as the cAMP-response element binding protein 2 (CREB-2). ATF4 belongs to a family of DNA-binding proteins that includes the AP-1 family of transcription factors, cAMP-response element binding proteins (CREBs) and CREB-like proteins. These transcription factors share a leucine zipper region that is involved in protein-protein interactions, located C-terminal to a stretch of basic amino acids that functions as a DNA binding domain.
