

HFE Antibody (Center) Blocking Peptide
Synthetic peptide
Catalog # BP6544c**Specification**

HFE Antibody (Center) Blocking Peptide - Product Information

Primary Accession [Q30201](#)

HFE Antibody (Center) Blocking Peptide - Additional Information

Gene ID 3077

Other Names

Hereditary hemochromatosis protein, HLA-H, HFE, HLAH

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP6544c](/products/AP6544c) was selected from the Center region of human HFE. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

HFE Antibody (Center) Blocking Peptide - Protein Information

Name HFE

Synonyms HLAH

Function

Binds to transferrin receptor (TFR) and reduces its affinity for iron-loaded transferrin.

Cellular Location

Cell membrane; Single-pass type I membrane protein

Tissue Location

Expressed in all tissues tested except brain.

HFE Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

HFE Antibody (Center) Blocking Peptide - Background

HFE is a membrane protein that is similar to MHC class I-type proteins and associates with beta2-microglobulin (beta2M). It is thought that this protein functions to regulate iron absorption by regulating the interaction of the transferrin receptor with transferrin. The iron storage disorder, hereditary haemochromatosis, is a recessive genetic disorder that results from defects in its gene.
