

### VHL Antibody (C-term) Blocking Peptide

Synthetic peptide Catalog # BP6549b

## **Specification**

## VHL Antibody (C-term) Blocking Peptide - Product Information

**Primary Accession** 

P40337

## VHL Antibody (C-term) Blocking Peptide - Additional Information

**Gene ID 7428** 

#### **Other Names**

Von Hippel-Lindau disease tumor suppressor, Protein G7, pVHL, VHL

### Target/Specificity

The synthetic peptide sequence used to generate the antibody <a href=/products/AP6549b>AP6549b</a> was selected from the C-term region of human VHL. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

## VHL Antibody (C-term) Blocking Peptide - Protein Information

## Name VHL

### **Function**

Involved in the ubiquitination and subsequent proteasomal degradation via the von Hippel-Lindau ubiquitination complex (PubMed:<a href="http://www.uniprot.org/citations/10944113" target="\_blank">10944113</a>, PubMed:<a href="http://www.uniprot.org/citations/17981124" target="\_blank">17981124</a>, PubMed:<a href="http://www.uniprot.org/citations/19584355" target="\_blank">19584355</a>). Seems to act as a target recruitment subunit in the E3 ubiquitin ligase complex and recruits hydroxylated hypoxia-inducible factor (HIF) under normoxic conditions (PubMed:<a href="http://www.uniprot.org/citations/10944113" target="\_blank">10944113</a>, PubMed:<a href="http://www.uniprot.org/citations/17981124" target="\_blank">17981124</a>). Involved in transcriptional repression through interaction with HIF1A, HIF1AN and histone deacetylases (PubMed:<a href="http://www.uniprot.org/citations/10944113" target="\_blank">10944113" target="\_blank">10944113" target="\_blank">10944113</a> , PubMed:<a href="http://www.uniprot.org/citations/10944113" target="\_blank">10944113</a> , PubMed:<a href="http://www.uniprot.org/citations/17981124" target="\_blank">1094

Tel: 858.875.1900 Fax: 858.875.1999

(PubMed:<a href="http://www.uniprot.org/citations/19584355" target=" blank">19584355</a>). Acts as a negative regulator of mTORC1 by promoting ubiquitination and degradation of RPTOR (PubMed: <a href="http://www.uniprot.org/citations/34290272" target="blank">34290272</a>).

#### **Cellular Location**

[Isoform 1]: Cytoplasm. Cell membrane; Peripheral membrane protein. Endoplasmic reticulum. Nucleus. Note=Found predominantly in the cytoplasm and with less amounts nuclear or membrane-associated (PubMed:9751722) Colocalizes with ADRB2 at the cell membrane (PubMed:19584355)

### **Tissue Location**

Expressed in the adult and fetal brain and kidney.

## VHL Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

## VHL Antibody (C-term) Blocking Peptide - Background

Von Hippel-Lindau syndrome (VHL) is a dominantly inherited familial cancer syndrome predisposing to a variety of malignant and benign tumors. A germline mutation of VHL gene is the basis of familial inheritance of VHL syndrome. The protein is a component of the protein complex that includes elongin B, elongin C, and cullin-2, and possesses ubiquitin ligase E3 activity. This protein is involved in the ubiquitination and degradation of hypoxia-inducible-factor (HIF), which is a transcription factor that plays a central role in the regulation of gene expression by oxygen. RNA polymerase II subunit POLR2G/RPB7 is also reported to be a target of this protein.
