

MVD Antibody (N-term) Blocking Peptide
Synthetic peptide
Catalog # BP6717a**Specification**

MVD Antibody (N-term) Blocking Peptide - Product InformationPrimary Accession [P53602](#)**MVD Antibody (N-term) Blocking Peptide - Additional Information****Gene ID** 4597**Other Names**

Diphosphomevalonate decarboxylase, Mevalonate (diphospho)decarboxylase, MDDase, Mevalonate pyrophosphate decarboxylase, MVD, MPD

Target/Specificity

The synthetic peptide sequence used to generate the antibody AP6717a was selected from the N-term region of human MVD. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

MVD Antibody (N-term) Blocking Peptide - Protein Information**Name** MVD**Synonyms** MPD {ECO:0000303|PubMed:14972328}**Function**

Catalyzes the ATP dependent decarboxylation of (R)-5- diphosphomevalonate to form isopentenyl diphosphate (IPP). Functions in the mevalonate (MVA) pathway leading to isopentenyl diphosphate (IPP), a key precursor for the biosynthesis of isoprenoids and sterol synthesis.

Cellular Location

Cytoplasm.

Tissue Location

Expressed in heart, skeletal muscle, lung, liver, brain, pancreas, kidney and placenta.

MVD Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

MVD Antibody (N-term) Blocking Peptide - Background

The enzyme mevalonate pyrophosphate decarboxylase catalyzes the conversion of mevalonate pyrophosphate into isopentenyl pyrophosphate in one of the early steps in cholesterol biosynthesis. It decarboxylates and dehydrates its substrate while hydrolyzing ATP.
