

BIKE Antibody (C-term) Blocking Peptide
Synthetic peptide
Catalog # BP7114b**Specification**

BIKE Antibody (C-term) Blocking Peptide - Product InformationPrimary Accession [Q9NSY1](#)**BIKE Antibody (C-term) Blocking Peptide - Additional Information****Gene ID** 55589**Other Names**

BMP-2-inducible protein kinase, BIKe, BMP2K, BIKE

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP7114b](/product/products/AP7114b) was selected from the C-term region of human BIKE. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

BIKE Antibody (C-term) Blocking Peptide - Protein Information**Name** BMP2K**Synonyms** BIKE**Function**

May be involved in osteoblast differentiation.

Cellular Location

Nucleus.

BIKE Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

BIKE Antibody (C-term) Blocking Peptide - Images**BIKE Antibody (C-term) Blocking Peptide - Background**

BIKE is the human homolog of mouse BMP-2-inducible kinase. Bone morphogenic proteins (BMPs) play a key role in skeletal development and patterning. Expression of the mouse gene is increased during BMP-2 induced differentiation and the gene product is a putative serine/threonine protein kinase containing a nuclear localization signal. Therefore, the protein encoded by this human homolog is thought to be a protein kinase with a putative regulatory role in attenuating the program of osteoblast differentiation.
