

# **ADAM9 Antibody (C-term) Blocking Peptide**

Synthetic peptide Catalog # BP7437b

### **Specification**

## ADAM9 Antibody (C-term) Blocking Peptide - Product Information

Primary Accession

<u>Q13443</u>

# ADAM9 Antibody (C-term) Blocking Peptide - Additional Information

**Gene ID 8754** 

#### **Other Names**

Disintegrin and metalloproteinase domain-containing protein 9, ADAM 9, 3424-, Cellular disintegrin-related protein, Meltrin-gamma, Metalloprotease/disintegrin/cysteine-rich protein 9, Myeloma cell metalloproteinase, ADAM9, KIAA0021, MCMP, MDC9, MLTNG

### Target/Specificity

The synthetic peptide sequence used to generate the antibody <a href=/products/AP7437b>AP7437b</a> was selected from the C-term region of human ADAM9. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

# ADAM9 Antibody (C-term) Blocking Peptide - Protein Information

### Name ADAM9

Synonyms KIAA0021, MCMP, MDC9, MLTNG

### **Function**

Metalloprotease that cleaves and releases a number of molecules with important roles in tumorigenesis and angiogenesis, such as TEK, KDR, EPHB4, CD40, VCAM1 and CDH5. May mediate cell-cell, cell- matrix interactions and regulate the motility of cells via interactions with integrins.

### **Cellular Location**

[Isoform 1]: Cell membrane; Single-pass type I membrane protein

## **Tissue Location**

Widely expressed. Expressed in chondrocytes. Isoform 2 is highly expressed in liver and heart

## ADAM9 Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

# ADAM9 Antibody (C-term) Blocking Peptide - Background

ADAM9 is a member of the ADAM (a disintegrin and metalloprotease domain) family. Members of this family are membrane-anchored proteins structurally related to snake venom disintegrins, and have been implicated in a variety of biological processes involving cell-cell and cell-matrix interactions, including fertilization, muscle development, and neurogenesis. This protein interacts with SH3 domain-containing proteins, binds mitotic arrest deficient 2 beta protein, and is also involved in TPA-induced ectodomain shedding of membrane-anchored heparin-binding EGF-like growth factor.
