

APOC2 Antibody (Center) Blocking Peptide

Synthetic peptide Catalog # BP7796c

Specification

APOC2 Antibody (Center) Blocking Peptide - Product Information

Primary Accession

P02655

APOC2 Antibody (Center) Blocking Peptide - Additional Information

Gene ID 344

Other Names

Apolipoprotein C-II, Apo-CII, ApoC-II, Apolipoprotein C2, Proapolipoprotein C-II, ProapoC-II, APOC2, APC2

Target/Specificity

The synthetic peptide sequence used to generate the antibody <a href="https://www.negarides.com/nega

href=/products/AP7796c>AP7796c was selected from the Center region of human APOC2. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

APOC2 Antibody (Center) Blocking Peptide - Protein Information

Name APOC2

Synonyms APC2

Function

Component of chylomicrons, very low-density lipoproteins (VLDL), low-density lipoproteins (LDL), and high-density lipoproteins (HDL) in plasma. Plays an important role in lipoprotein metabolism as an activator of lipoprotein lipase. Both proapolipoprotein C-II and apolipoprotein C-II can activate lipoprotein lipase. In normolipidemic individuals, it is mainly distributed in the HDL, whereas in hypertriglyceridemic individuals, predominantly found in the VLDL and LDL.

Cellular Location

Secreted.

Tissue Location
Liver and intestine..

APOC2 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

APOC2 Antibody (Center) Blocking Peptide - Background

APOC2 is secreted in plasma where it is a component of very low density lipoprotein. The protein activates the enzyme lipoprotein lipase, which hydrolyzes triglycerides and thus provides free fatty acids for cells. Mutations in the gene encodes this protein cause hyperlipoproteinemia type IB, characterized by hypertriglyceridemia, xanthomas, and increased risk of pancreatitis and early atherosclerosis.
