

FKBP1B Antibody (N-term) Blocking Peptide
Synthetic peptide
Catalog # BP7868d**Specification**

FKBP1B Antibody (N-term) Blocking Peptide - Product InformationPrimary Accession [P68106](#)**FKBP1B Antibody (N-term) Blocking Peptide - Additional Information**

Gene ID 2281

Other Names

Peptidyl-prolyl cis-trans isomerase FKBP1B, PPlase FKBP1B, 126 kDa FK506-binding protein, 126 kDa FKBP, FKBP-126, FK506-binding protein 1B, FKBP-1B, Immunophilin FKBP126, Rotamase, h-FKBP-12, FKBP1B, FKBP126, FKBP1L, FKBP9, OTK4

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP7868d](/products/AP7868d) was selected from the N-term region of human FKBP1B. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

FKBP1B Antibody (N-term) Blocking Peptide - Protein InformationName FKBP1B ([HGNC:3712](#))**Function**

Has the potential to contribute to the immunosuppressive and toxic effects of FK506 and rapamycin. PPlases accelerate the folding of proteins. It catalyzes the cis-trans isomerization of proline imidic peptide bonds in oligopeptides.

Cellular Location

Cytoplasm. Sarcoplasmic reticulum

Tissue Location

Detected in heart muscle (at protein level). Isoform 1 and isoform 2 are ubiquitous with highest levels in brain and thymus.

FKBP1B Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

FKBP1B Antibody (N-term) Blocking Peptide - Background

FKBP1B is a member of the immunophilin protein family, which play a role in immunoregulation and basic cellular processes involving protein folding and trafficking. This protein is a cis-trans prolyl isomerase that binds the immunosuppressants FK506 and rapamycin. The protein is highly similar to the FK506-binding protein 1A. Its physiological role is thought to be in excitation-contraction coupling in cardiac muscle.
