

Natriuretic Peptide Receptor B Antibody (N-term) Blocking peptide
Synthetic peptide
Catalog # BP8112b**Specification**

Natriuretic Peptide Receptor B Antibody (N-term) Blocking peptide - Product InformationPrimary Accession [P20594](#)**Natriuretic Peptide Receptor B Antibody (N-term) Blocking peptide - Additional Information****Gene ID** 4882**Other Names**

Atrial natriuretic peptide receptor 2, Atrial natriuretic peptide receptor type B, ANP-B, ANPR-B, NPR-B, Guanylate cyclase B, GC-B, NPR2, ANPRB

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP8112b](/product/products/AP8112b) was selected from the C-term region of human ANPB . A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

Natriuretic Peptide Receptor B Antibody (N-term) Blocking peptide - Protein Information**Name** NPR2**Synonyms** ANPRB**Function**

Receptor for the C-type natriuretic peptide NPPC/CNP hormone. Has guanylate cyclase activity upon binding of its ligand. May play a role in the regulation of skeletal growth.

Cellular Location

Cell membrane; Single-pass type I membrane protein

Natriuretic Peptide Receptor B Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

Natriuretic Peptide Receptor B Antibody (N-term) Blocking peptide - Background

ANPB (natriuretic peptide receptor B) is one of two integral membrane receptors for natriuretic peptides. Both ANPA and ANPB contain five functional domains: an extracellular ligand-binding domain, a single membrane-spanning region, and intracellularly a protein kinase homology domain, an helical hinge region involved in oligomerization, and a carboxyl-terminal guanylyl cyclase catalytic domain. ANPB is the primary receptor for C-type natriuretic peptide (CNP), which upon ligand binding exhibits greatly increased guanylyl cyclase activity.
