

# **Fucokinase Antibody (C-term) Blocking Peptide**

Synthetic peptide Catalog # BP8165b

## **Specification**

## Fucokinase Antibody (C-term) Blocking Peptide - Product Information

Primary Accession <u>Q8N0W3</u>
Other Accession <u>NP 659496</u>

## Fucokinase Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 197258

#### **Other Names**

L-fucose kinase, Fucokinase, FUK

## Target/Specificity

The synthetic peptide sequence used to generate the antibody <a href=/product/products/AP8165b>AP8165b</a> was selected from the C-term region of human Fucokinase. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

### Fucokinase Antibody (C-term) Blocking Peptide - Protein Information

Name FCSK (HGNC:29500)

### **Function**

Takes part in the salvage pathway for reutilization of fucose from the degradation of oligosaccharides.

### **Tissue Location**

Expressed in fibroblasts.

## Fucokinase Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

• Blocking Peptides

## Fucokinase Antibody (C-term) Blocking Peptide - Background

Fucokinase belongs to the GHMP (galacto-, homoserine, mevalonate and phosphomevalonate) kinase family and catalyzes the phosphorylation of L-fucose to form beta-L-fucose 1-phosphate. This enzyme catalyzes the first step in the utilization of free L-fucose in glycoprotein and glycolipid synthesis. L-fucose may be important in mediating a number of cell-cell interactions such as blood group antigen recognition, inflammation, and metastatis.
