

ADH5 Antibody (Center) Blocking Peptide
Synthetic peptide
Catalog # BP8562c**Specification**

ADH5 Antibody (Center) Blocking Peptide - Product InformationPrimary Accession [P11766](#)**ADH5 Antibody (Center) Blocking Peptide - Additional Information****Gene ID** 128**Other Names**

Alcohol dehydrogenase class-3, Alcohol dehydrogenase 5, Alcohol dehydrogenase class chi chain, Alcohol dehydrogenase class-III, Glutathione-dependent formaldehyde dehydrogenase, FALDH, FDH, GSH-FDH, 111-, S-(hydroxymethyl)glutathione dehydrogenase, ADH5 (http://www.genenames.org/cgi-bin/gene_symbol_report?hgnc_id=253) HGNC:253, ADHX, FDH

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP8562c](/products/AP8562c) was selected from the Center region of human ADH5. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

ADH5 Antibody (Center) Blocking Peptide - Protein Information**Name** ADH5 ([HGNC:253](#))**Synonyms** ADHX, FDH**Function**

Catalyzes the oxidation of long-chain primary alcohols and the oxidation of S-(hydroxymethyl) glutathione (PubMed: [8460164](http://www.uniprot.org/citations/8460164)). Also oxidizes long chain omega-hydroxy fatty acids, such as 20-HETE, producing both the intermediate aldehyde, 20-oxoarachidonate and the end product, a dicarboxylic acid, (5Z,8Z,11Z,14Z)-eicosatetraenedioate (PubMed: [16081420](http://www.uniprot.org/citations/16081420)). Class-III ADH

is remarkably ineffective in oxidizing ethanol (PubMed:8460164). Required for clearance of cellular formaldehyde, a cytotoxic and carcinogenic metabolite that induces DNA damage (PubMed:33355142).

Cellular Location

Cytoplasm.

ADH5 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

ADH5 Antibody (Center) Blocking Peptide - Background

ADH5 is a member of the alcohol dehydrogenase family. Members of this family metabolize a wide variety of substrates, including ethanol, retinol, other aliphatic alcohols, hydroxysteroids, and lipid peroxidation products. This protein forms a homodimer. It has virtually no activity for ethanol oxidation, but exhibits high activity for oxidation of long-chain primary alcohols and for oxidation of S-hydroxymethyl-glutathione, a spontaneous adduct between formaldehyde and glutathione. This enzyme is an important component of cellular metabolism for the elimination of formaldehyde, a potent irritant and sensitizing agent that causes lacrymation, rhinitis, pharyngitis, and contact dermatitis.
