

#### XPA Antibody (C-term) Blocking Peptide Synthetic peptide Catalog # BP8784b

Specification

# XPA Antibody (C-term) Blocking Peptide - Product Information

Primary Accession

## P23025

# XPA Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 7507

**Other Names** 

DNA repair protein complementing XP-A cells, Xeroderma pigmentosum group A-complementing protein, XPA, XPAC

#### Target/Specificity

The synthetic peptide sequence used to generate the antibody <a href=/products/AP8784b>AP8784b</a> was selected from the C-term region of human XPA. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

## XPA Antibody (C-term) Blocking Peptide - Protein Information

Name XPA

Synonyms XPAC

Function

Involved in DNA excision repair. Initiates repair by binding to damaged sites with various affinities, depending on the photoproduct and the transcriptional state of the region. Required for UV-induced CHEK1 phosphorylation and the recruitment of CEP164 to cyclobutane pyrimidine dimmers (CPD), sites of DNA damage after UV irradiation.

Cellular Location Nucleus

**Tissue Location** 

Expressed in various cell lines and in skin fibroblasts.

# XPA Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

## XPA Antibody (C-term) Blocking Peptide - Background

XPA is involved in DNA excision repair. It initiates repair by binding to damaged sites with various affinities, depending on the photoproduct and the transcriptional state of the region. This protein is required for UV-induced CHK1 phosphorylation and the recruitment of CEP164 to cyclobutane pyrimidine dimmers (CPD), sites of DNA damage after UV irradiation.
