

ITGA1 Antibody (Center) Blocking Peptide
Synthetic peptide
Catalog # BP8814c**Specification**

ITGA1 Antibody (Center) Blocking Peptide - Product InformationPrimary Accession [P56199](#)**ITGA1 Antibody (Center) Blocking Peptide - Additional Information****Gene ID** 3672**Other Names**

Integrin alpha-1, CD49 antigen-like family member A, Laminin and collagen receptor, VLA-1, CD49a, ITGA1

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP8814c](/products/AP8814c) was selected from the Center region of human ITGA1. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

ITGA1 Antibody (Center) Blocking Peptide - Protein Information**Name** ITGA1**Function**

Integrin alpha-1/beta-1 is a receptor for laminin and collagen. It recognizes the proline-hydroxylated sequence G-F-P-G-E-R in collagen. Involved in anchorage-dependent, negative regulation of EGF-stimulated cell growth.

Cellular Location

Membrane; Single-pass type I membrane protein.

ITGA1 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

ITGA1 Antibody (Center) Blocking Peptide - Background

ITGA1 is the alpha 1 subunit of integrin receptors. This protein heterodimerizes with the beta 1 subunit to form a cell-surface receptor for collagen and laminin. The heterodimeric receptor is involved in cell-cell adhesion and may play a role in inflammation and fibrosis. The alpha 1 subunit contains an inserted (I) von Willebrand factor type I domain which is thought to be involved in collagen binding.
