

DUSP24 Antibody (Center) Blocking Peptide

Synthetic peptide Catalog # BP8875c

Specification

DUSP24 Antibody (Center) Blocking Peptide - Product Information

Primary Accession

09Y6|8

DUSP24 Antibody (Center) Blocking Peptide - Additional Information

Gene ID 51657

Other Names

Serine/threonine/tyrosine-interacting-like protein 1, Dual specificity phosphatase inhibitor MK-STYX, Dual specificity protein phosphatase 24, Map kinase phosphatase-like protein MK-STYX, STYXL1, DUSP24, MKSTYX

Target/Specificity

The synthetic peptide sequence used to generate the antibody AP8875c was selected from the Center region of human DUSP24. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

DUSP24 Antibody (Center) Blocking Peptide - Protein Information

Name STYXL1

Synonyms DUSP24, MKSTYX

Function

Catalytically inactive phosphatase (PubMed:20180778, PubMed:23163895). By binding to G3BP1, inhibits the formation of G3BP1- induced stress granules (PubMed:20180778, PubMed:23163895). Does not act by protecting the dephosphorylation of G3BP1 at 'Ser-149' (PubMed:23163895). Inhibits PTPMT1 phosphatase activity (PubMed:<a

href="http://www.uniprot.org/citations/24709986" target="_blank">24709986). By inhibiting PTPMT1, positively regulates intrinsic apoptosis (PubMed:21262771). May play a role in the formation of neurites during neuronal development (PubMed:29250526).

Cellular LocationMitochondrion matrix

DUSP24 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

DUSP24 Antibody (Center) Blocking Peptide - Background

DUSP24 is probable pseudophosphatase. It contains a Ser residue instead of a conserved Cys residue in the dsPTPase catalytic loop which probably renders it catalytically inactive as a phosphatase. The binding pocket may be however sufficiently preserved to bind phosphorylated substrates, and maybe protect them from phosphatases.
