

# ATP1B2 Antibody (Center) Blocking Peptide

Synthetic peptide Catalog # BP9271c

### **Specification**

### ATP1B2 Antibody (Center) Blocking Peptide - Product Information

Primary Accession

P14415

## ATP1B2 Antibody (Center) Blocking Peptide - Additional Information

Gene ID 482

#### **Other Names**

Sodium/potassium-transporting ATPase subunit beta-2, Adhesion molecule in glia, AMOG, Sodium/potassium-dependent ATPase subunit beta-2, ATP1B2

## **Target/Specificity**

The synthetic peptide sequence used to generate the antibody <a href=/products/AP9271c>AP9271c</a> was selected from the Center region of human ATP1B2. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

### ATP1B2 Antibody (Center) Blocking Peptide - Protein Information

### Name ATP1B2

### **Function**

This is the non-catalytic component of the active enzyme, which catalyzes the hydrolysis of ATP coupled with the exchange of Na(+) and K(+) ions across the plasma membrane. The exact function of the beta-2 subunit is not known.

#### **Cellular Location**

Cell membrane; Single-pass type II membrane protein

#### ATP1B2 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

# ATP1B2 Antibody (Center) Blocking Peptide - Background

The protein belongs to the family of Na+/K+ and H+/K+ ATPases beta chain proteins, and to the subfamily of Na+/K+ -ATPases. Na+/K+ -ATPase is an integral membrane protein responsible for establishing and maintaining the electrochemical gradients of Na and K ions across the plasma membrane. These gradients are essential for osmoregulation, for sodium-coupled transport of a variety of organic and inorganic molecules, and for electrical excitability of nerve and muscle. This enzyme is composed of two subunits, a large catalytic subunit (alpha) and a smaller glycoprotein subunit (beta). The beta subunit regulates, through assembly of alpha/beta heterodimers, the number of sodium pumps transported to the plasma membrane.
