FBXO4 Antibody (Center) Blocking Peptide

Synthetic peptide
Catalog # BP9295c

Specification

FBXO4 Antibody (Center) Blocking Peptide - Product Information

Primary Accession Q9UKT5

FBXO4 Antibody (Center) Blocking Peptide - Additional Information

Gene ID 26272

Other Names
F-box only protein 4, FBXO4, FBX4

Target/Specificity
The synthetic peptide sequence used to generate the antibody AP9295c was selected from the Center region of human FBXO4. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format
Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage
Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions
This product is for research use only. Not for use in diagnostic or therapeutic procedures.

FBXO4 Antibody (Center) Blocking Peptide - Protein Information

Name FBXO4

Synonyms FBX4

Function
Substrate recognition component of a SCF (SKP1-CUL1-F-box protein) E3 ubiquitin-protein ligase complex that mediates the ubiquitination and subsequent proteasomal degradation of target proteins (PubMed:18598945, PubMed:10531035, PubMed:29142209, PubMed:20181953). Promotes ubiquitination of CCND1 and its subsequent proteasomal degradation (PubMed:18598945). Recognizes TERF1 and promotes its ubiquitination together with UBE2D1 (PubMed:<a href="http://www.uniprot.org/citations/16275645"

target="_blank">16275645, PubMed:20159592). Promotes ubiquitination of FXR1 following phosphorylation of FXR1 by GSK3B, leading to FXR1 degradation by the proteasome (PubMed:29142209).

Cellular Location
Cytoplasm {ECO:0000250|UniProtKB:Q8CHQ0}.

FBXO4 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

FBXO4 Antibody (Center) Blocking Peptide - Background

FBXO4 encodes a member of the F-box protein family which is characterized by an approximately 40 amino acid motif, the F-box. The F-box proteins constitute one of the four subunits of the ubiquitin protein ligase complex called SCFs (SKP1-cullin-F-box), which function in phosphorylation-dependent ubiquitination. The F-box proteins are divided into 3 classes: Fbws containing WD-40 domains, Fbls containing leucine-rich repeats, and Fbxs containing either different protein-protein interaction modules or no recognizable motifs. The protein belongs to the Fbxs class.
