

MICALL1 Antibody (C-term) Blocking Peptide
Synthetic peptide
Catalog # BP9643b**Specification**

MICALL1 Antibody (C-term) Blocking Peptide - Product InformationPrimary Accession [Q16540](#)**MICALL1 Antibody (C-term) Blocking Peptide - Additional Information****Gene ID** 6150**Other Names**

39S ribosomal protein L23, mitochondrial, L23mt, MRP-L23, L23 mitochondrial-related protein, Ribosomal protein L23-like, MRPL23, L23MRP, RPL23L

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

MICALL1 Antibody (C-term) Blocking Peptide - Protein Information**Name** MRPL23**Synonyms** L23MRP, RPL23L**Cellular Location**

Mitochondrion

MICALL1 Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

MICALL1 Antibody (C-term) Blocking Peptide - Images**MICALL1 Antibody (C-term) Blocking Peptide - Background**

Mammalian mitochondrial ribosomal proteins are encoded by nuclear genes and help in protein synthesis within the mitochondrion. Mitochondrial ribosomes (mitoribosomes) consist of a small 28S

subunit and a large 39S subunit. They have an estimated 75% protein to rRNA composition compared to prokaryotic ribosomes, where this ratio is reversed. Another difference between mammalian mitoribosomes and prokaryotic ribosomes is that the latter contain a 5S rRNA. Among different species, the proteins comprising the mitoribosome differ greatly in sequence, and sometimes in biochemical properties, which prevents easy recognition by sequence homology. This protein is a 39S subunit protein.
