

YTHD3 Antibody (Center) Blocking Peptide
Synthetic peptide
Catalog # BP9985a**Specification**

YTHD3 Antibody (Center) Blocking Peptide - Product InformationPrimary Accession [Q7Z739](#)**YTHD3 Antibody (Center) Blocking Peptide - Additional Information****Gene ID** 253943**Other Names**

YTH domain-containing family protein 3, YTHDF3

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

YTHD3 Antibody (Center) Blocking Peptide - Protein Information**Name** YTHDF3 {ECO:0000303|PubMed:28106072, ECO:0000312|HGNC:HGNC:26465}**Function**

Specifically recognizes and binds N6-methyladenosine (m6A)-containing RNAs, and regulates their stability (PubMed: [28106072](http://www.uniprot.org/citations/28106072), PubMed: [28106076](http://www.uniprot.org/citations/28106076), PubMed: [28281539](http://www.uniprot.org/citations/28281539), PubMed: [32492408](http://www.uniprot.org/citations/32492408)). M6A is a modification present at internal sites of mRNAs and some non-coding RNAs and plays a role in mRNA stability and processing (PubMed: [22575960](http://www.uniprot.org/citations/22575960), PubMed: [24284625](http://www.uniprot.org/citations/24284625), PubMed: [28106072](http://www.uniprot.org/citations/28106072), PubMed: [28281539](http://www.uniprot.org/citations/28281539), PubMed: [32492408](http://www.uniprot.org/citations/32492408)). Acts as a regulator of mRNA stability by promoting degradation of m6A-containing mRNAs via interaction with the CCR4-NOT complex or PAN3 (PubMed: [32492408](http://www.uniprot.org/citations/32492408)). The YTHDF paralogs (YTHDF1, YTHDF2 and YTHDF3) share m6A-containing mRNAs targets and act redundantly to mediate mRNA degradation and cellular differentiation (PubMed: [28106072](http://www.uniprot.org/citations/28106072), PubMed: [28106072](http://www.uniprot.org/citations/28106072), PubMed: [28106072](http://www.uniprot.org/citations/28106072)).

href="http://www.uniprot.org/citations/28106076" target="_blank">28106076, PubMed:32492408). Acts as a negative regulator of type I interferon response by down-regulating interferon-stimulated genes (ISGs) expression: acts by binding to FOXO3 mRNAs (By similarity). Binds to FOXO3 mRNAs independently of METTL3-mediated m6A modification (By similarity). Can also act as a regulator of mRNA stability in cooperation with YTHDF2 by binding to m6A-containing mRNA and promoting their degradation (PubMed:28106072). Recognizes and binds m6A- containing circular RNAs (circRNAs); circRNAs are generated through back-splicing of pre-mRNAs, a non-canonical splicing process promoted by dsRNA structures across circularizing exons (PubMed:28281539). Promotes formation of phase-separated membraneless compartments, such as P-bodies or stress granules, by undergoing liquid-liquid phase separation upon binding to mRNAs containing multiple m6A-modified residues: polymethylated mRNAs act as a multivalent scaffold for the binding of YTHDF proteins, juxtaposing their disordered regions and thereby leading to phase separation (PubMed:31388144, PubMed:31292544, PubMed:32451507). The resulting mRNA-YTHDF complexes then partition into different endogenous phase-separated membraneless compartments, such as P-bodies, stress granules or neuronal RNA granules (PubMed:31292544). May also recognize and bind N1-methyladenosine (m1A)-containing mRNAs: inhibits trophoblast invasion by binding to m1A-methylated transcripts of IGF1R, promoting their degradation (PubMed:32194978).

Cellular Location

Cytoplasm, cytosol. Cytoplasm, P-body. Cytoplasm, Stress granule

YTHD3 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.
