

# **Recombinant Murine IFN-γ**

Catalog # PBG10164

# Specification

# **Recombinant Murine IFN-γ - Product Information**

# Recombinant Murine IFN-y - Additional Information

### Description

IFN- $\gamma$  is an acid-labile interferon produced by CD4 and CD8 T lymphocytes as well as activated NK cells. IFN- $\gamma$  receptors are present in most immune cells, which respond to IFN- $\gamma$  signaling by increasing the surface expression of class I MHC proteins. This promotes the presentation of antigen to T-helper (CD4+) cells. IFN- $\gamma$  signaling in antigen-presenting cells and antigen-recognizing B and T lymphocytes regulates the antigen-specific phases of the immune response. Additionally, IFN- $\gamma$  stimulates a number of lymphoid cell functions including the anti-microbial and anti-tumor responses of macrophages, NK cells, and neutrophils. Human IFN- $\gamma$  species-specific and is biologically active only in human and primate cells. Recombinant murine IFN- $\gamma$  is a 15.6 kDa protein containing 134 amino acid residues.

### BiologicalActivity

Determined by its ability to inhibit the proliferation of murine WEHI-279 cells. The expected <strong>ED</strong><sub>50</sub> is  $\leq$  0.2 ng/ml, corresponding to a specific activity of  $\geq$  5 x 10<sup>6</sup> units/mg.

Authenticity Verified by N-terminal and Mass Spectrometry analyses (when applicable).

#### Endotoxin

Endotoxin level is <0.1 ng/  $\mu$ g of protein (<1EU/  $\mu$ g).

## **Protein Content**

Verified by UV Spectroscopy and/or SDS-PAGE gel.

Storage -20°C

#### Precautions

Recombinant Murine IFN- $\gamma$  is for research use only and not for use in diagnostic or therapeutic procedures.

## **Recombinant Murine IFN-γ - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- <u>Dot Blot</u>
- Immunohistochemistry

- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>
