

Animal-Free Recombinant Human IL-36γ (IL-1F9)

Catalog # PBG10526

Specification

Animal-Free Recombinant Human IL-36γ (IL-1F9) - Product Information

Animal-Free Recombinant Human IL-36y (IL-1F9) - Additional Information

Description

The IL-1 family is comprised of 11 structurally related ligands, including recently re-named IL-36 α (IL-1F6), β (IL-1F8) and γ (IL-1F9). IL-36 γ is highly expressed in psoriatic plaques and in tissues containing epithelial cells. IL-36 γ signals through the IL-1Rrp2 (IL-1R6) receptor, which is primarily expressed on certain dendritic cells. The interaction of the IL-1Rrp2 receptor with IL-36 ligands induces dendritic cell maturation and activation. IL-36 γ also functions as an agonist of NF-kappaB, and can stimulate the inflammatory response in bronchial epithelial cells. Recombinant human IL-36 γ is a 17.0 kDa protein containing 152 amino acid residues.

BiologicalActivity Measured by its ability to induce IL-8 production by human PBMCs.

Authenticity

Verified by N-terminal and Mass Spectrometry analyses (when applicable).

Endotoxin Endotoxin level is <0.1 ng/ μg of protein (<1EU/ μg).

Protein Content Verified by UV Spectroscopy and/or SDS-PAGE gel.

Storage -20°C

Precautions Animal-Free Recombinant Human IL-36 γ (IL-1F9) is for research use only and not for use in diagnostic or therapeutic procedures.

Animal-Free Recombinant Human IL-36γ (IL-1F9) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>
