Application & Usage The peptide is used for blocking the

antibody activity of active Cyr61. It usually blocks the antibody activity completely in Western blot analysis by incubating the peptide with equal volume of antibody for

30 minutes at 37°C

Cyr61 Blocking Peptide - Protein Information

Name Ccn1 {ECO:0000312|MGI:MGI:88613}

Function

Promotes cell proliferation, chemotaxis, angiogenesis and cell adhesion. Appears to play a role in wound healing by up- regulating, in skin fibroblasts, the expression of a number of genes involved in angiogenesis, inflammation and matrix remodeling including VEGA-A, VEGA-C, MMP1, MMP3,

TIMP1, uPA, PAI-1 and integrins alpha-3 and alpha-5 (By similarity). CCN1-mediated gene regulation is dependent on heparin-binding (By similarity). Down-regulates the expression of alpha-1 and alpha-2 subunits of collagen type-1 (By similarity). Promotes cell adhesion and adhesive signaling through integrin alpha- 6/beta-1, cell migration through integrin alpha-1/beta-5 and cell proliferation through integrin alpha-v/beta-3 (By similarity).

Cellular Location Secreted.

Tissue Location

Low in kidney, adrenal gland, testes, brain, and ovary, moderate in heart, uterus, and skeletal muscle, highest in lung
