

Noggin, human recombinant protein none Catalog # PBV10350r

Specification

Noggin, human recombinant protein - Product info

Primary Accession	<u> 013253</u>
Calculated MW	23.1 kDa KDa

Noggin, human recombinant protein - Additional Info

Gene ID Gene Symbol Other Names NOG	9241 NOG
Gene Source Source Assay&Purity Assay2&Purity2 Recombinant Results	Human E. coli SDS-PAGE; ≥95% HPLC; ≥95% Yes 0.05-0.08 μq/ml
Application Notes	0.05-0.08 μg/m

Reconstitute in H_2O to a concentration of 0.1 to 1.0 mg/ml. Note: Due to solubility reasons the protein should be kept at low pH. This solution can then be diluted into other aqueous buffers

Format Lyophilized protein

Storage -20°C; Sterile filtered and lyophilized with no additives

Noggin, human recombinant protein - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

Noggin, human recombinant protein - Images

Noggin, human recombinant protein - Background

Noggin belongs to a group of diffusible proteins which bind to ligands of the TGF-β family and regulate their activity by inhibiting their access to signaling receptors. Noggin was originally identified as a BMP-4 antagonist whose action is critical for proper formation of the head and other dorsal structures. Consequently, Noggin has been shown to modulate the activities of other BMPs including BMP-2,-7,-13, and -14. Targeted deletion of Noggin in mice results in prenatal death and recessive phenotype displaying a severely malformed skeletal system. Conversely, transgenic mice over-expressing Noggin in mature osteoblasts display impaired osteoblastic differentiation, reduced bone formation, and severe osteoporosis. Recombinant human Noggin is a 23.1 kDa non-disulfide-linked homodimer consisting of a total of 206 amino acid residues.
