

**PGC-1 alpha Blocking Peptide**  
**Catalog # PBV10446b****Specification****PGC-1 alpha Blocking Peptide - Product Information**

Primary Accession	<a href="#">O70343</a>
Other Accession	<a href="#">NP_032930.1</a>
Gene ID	19017
Calculated MW	90588

**PGC-1 alpha Blocking Peptide - Additional Information****Gene ID 19017****Application & Usage**

The peptide is used for blocking the antibody activity of PGC-1 alpha. It usually blocks the antibody activity completely in Western blot analysis by incubating the peptide with equal volume of antibody for 30-60 minutes at 37°C.

**Other Names**

Peroxisome proliferator-activated receptor gamma coactivator 1-alpha, PGC-1-alpha, PPAR-gamma coactivator 1-alpha, PPARGC-1-alpha, Ppargc1a, Pgc1, Pgc1a, Ppargc1

**Target/Specificity**  
PGC-1 alpha**Formulation**

50 µg (0.5 mg/ml) in phosphate buffered saline (PBS), pH 7.2, containing 50% glycerol, 1% BSA and 0.02% thimerosal.

**Reconstitution & Storage**  
-20 °C**Background Descriptions****Precautions**

PGC-1 alpha Blocking Peptide is for research use only and not for use in diagnostic or therapeutic procedures.

**PGC-1 alpha Blocking Peptide - Protein Information****Name** Ppargc1a**Synonyms** Pgc1, Pgcl1, Ppargc1**Function**

Transcriptional coactivator for steroid receptors and nuclear receptors (PubMed:<a href="http://www.uniprot.org/citations/15744310" target="\_blank">15744310</a>, PubMed:<a href="http://www.uniprot.org/citations/12754525" target="\_blank">12754525</a>, PubMed:<a href="http://www.uniprot.org/citations/23217713" target="\_blank">23217713</a>, PubMed:<a href="http://www.uniprot.org/citations/9529258" target="\_blank">9529258</a>). Greatly increases the transcriptional activity of PPARG and thyroid hormone receptor on the uncoupling protein promoter (PubMed:<a href="http://www.uniprot.org/citations/15744310" target="\_blank">15744310</a>, PubMed:<a href="http://www.uniprot.org/citations/12754525" target="\_blank">12754525</a>, PubMed:<a href="http://www.uniprot.org/citations/23217713" target="\_blank">23217713</a>, PubMed:<a href="http://www.uniprot.org/citations/9529258" target="\_blank">9529258</a>). Can regulate key mitochondrial genes that contribute to the program of adaptive thermogenesis (PubMed:<a href="http://www.uniprot.org/citations/15744310" target="\_blank">15744310</a>, PubMed:<a href="http://www.uniprot.org/citations/12754525" target="\_blank">12754525</a>, PubMed:<a href="http://www.uniprot.org/citations/23217713" target="\_blank">23217713</a>, PubMed:<a href="http://www.uniprot.org/citations/9529258" target="\_blank">9529258</a>). Plays an essential role in metabolic reprogramming in response to dietary availability through coordination of the expression of a wide array of genes involved in glucose and fatty acid metabolism (PubMed:<a href="http://www.uniprot.org/citations/15744310" target="\_blank">15744310</a>, PubMed:<a href="http://www.uniprot.org/citations/12754525" target="\_blank">12754525</a>, PubMed:<a href="http://www.uniprot.org/citations/23217713" target="\_blank">23217713</a>, PubMed:<a href="http://www.uniprot.org/citations/9529258" target="\_blank">9529258</a>). Acts as a key regulator of gluconeogenesis: stimulates hepatic gluconeogenesis by increasing the expression of gluconeogenic enzymes, and acting together with FOXO1 to promote the fasting gluconeogenic program (PubMed:<a href="http://www.uniprot.org/citations/12754525" target="\_blank">12754525</a>). Induces the expression of PERM1 in the skeletal muscle in an ESRRA-dependent manner (By similarity). Also involved in the integration of the circadian rhythms and energy metabolism (PubMed:<a href="http://www.uniprot.org/citations/17476214" target="\_blank">17476214</a>). Required for oscillatory expression of clock genes, such as BMAL1 and NR1D1, through the coactivation of RORA and RORC, and metabolic genes, such as PDK4 and PEPCK (PubMed:<a href="http://www.uniprot.org/citations/17476214" target="\_blank">17476214</a>).

#### **Cellular Location**

Nucleus. Nucleus, PML body

#### **Tissue Location**

White quadriceps and red tibialis anterior (TA) muscles, liver, kidney and brown adipose tissue (at protein level) Skeletal muscle, brown adipose tissue, heart, kidney and brain

#### **PGC-1 alpha Blocking Peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.
