

Prolactin Receptor, rat recombinant protein

PRL-R, Prolactin receptor, Lactogen receptor, Prlr, PRL, luteotropic hormone, LTH, PRLR, PRL-R, PRL
Catalog # PBV10525r

Specification

Prolactin Receptor, rat recombinant protein - Product info

Primary Accession <u>P05710</u>

Calculated MW 24.12 kDa KDa

Prolactin Receptor, rat recombinant protein - Additional Info

Gene ID 24684
Gene Symbol Prir

Other Names

PRL-R, Prolactin receptor, Lactogen receptor, Prlr, PRL, luteotropic hormone, LTH, PRLR, PRL-R, PRL

Gene Source Rat Source E. coli

Assay&Purity SDS-PAGE; ≥97% Assay2&Purity2 HPLC; ≥97%

Recombinant Yes

Application Notes

Reconstitute in sterile dH_2O to a concentration of 0.1 -1 mg/ml and let the lyophilized pellet dissolve completely. This solution can then be diluted into other aqueous buffers

Format

Lyophilized protein

Storage

-20°C; Sterile filtered and lyophilized from a concentrated (1 mg/ml) solution with 0.0045 mM $NaHCO_3$

Prolactin Receptor, rat recombinant protein - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

Prolactin Receptor, rat recombinant protein - Background

Prolactin is a pituitary hormone that plays a role in the stimulation of milk production, salt and H₂O regulation, growth, development and reproduction. The primary step in its action is the binding to a specific membrane receptor (prolactin receptor) which belongs to the superfamily of class 1 cytokine receptors. Prolactin is a hormone involved in a range of significant functions including ion transport and osmoregulation, stimulation of milk, protein synthesis as well as the regulation of numerous reproductive functions. Prolactin exerts its influence on different cell types through a signal transduction pathway which begins with the binding of the hormone to a transmembrane Prolactin receptor. PRLR varies in size (short and long forms) with tissue source and species, from ~40 kDa to 100 kDa. Recombinant human Prolactin Receptor (Extra Cellular Domain) produced in E.Coli is a non-glycosylated, Polypeptide chain containing 206 amino acids and having a molecular mass of 24.12 kDa.
