Human recombinant protein PRDX 1 - Background

Peroxiredoxin-1 in humans is encoded by the PRDX1 gene. This gene encodes a member of the peroxiredoxin family of antioxidant enzymes, which reduce hydrogen peroxide and alkyl hydroperoxides. The encoded protein may play an antioxidant protective role in cells, and may contribute to the antiviral activity of CD8 (+) T-cells. It protein may also have a proliferative effect and play a role in cancer development or progression.
