

FGF-23, human recombinant protein
Fibroblast Growth Factor-23
Catalog # PBV10781r**Specification**

FGF-23, human recombinant protein - Product info

Primary Accession [O9GZV9](#)
Calculated MW **22.5 kDa** KDa

FGF-23, human recombinant protein - Additional Info

Gene ID **8074**
Gene Symbol **FGF23**

Other Names
Fibroblast Growth Factor-23

Gene Source **Human**
Source **E.coli**
Assay&Purity **SDS-PAGE; ≥95%**
Assay2&Purity2 **HPLC;**
Recombinant **Yes**
Sequence **MYPNASPLLGS SSWGGLIHLY TATARN SYHL
QIHKNGHVDG APHQTIYSAL MIRSEDAGFV
VITGVMSRRY LCMDFRGNIF GSHYFDPENC
RFQHQTLENG YDVYHSPQYH FLVSLGRAKR
AFLPGMNPPP YSQFLSRNE IPLIHFNTP
PRRHTRSAED DSERDPLNLV KPRARMTPAP
ASCSQELPSA EDNSPMASDP LGVVRGGRVN
THAGGTGPEG CRPFAKFI**

Target/Specificity
FGF-23

Application Notes

Centrifuge the vial prior to opening. Reconstitute in water to a concentration of 0.1-1.0 mg/ml. Do not vortex. This solution can be stored at 2-8°C for up to 1 week. For extended storage, it is recommended to further dilute in a buffer containing a carrier protein (example 0.1% BSA) and store in working aliquots at -20°C to -80°C.

Format
Lyophilized powder

Storage
-20°C; Sterile filtered through a 0.2 micron filter. Lyophilized from 10 mM sodium phosphate, pH 8.0 and 50 mM NaCl.

FGF-23, human recombinant protein - Protocols

Provided below are standard protocols that you may find useful for product applications.

FGF-23, human recombinant protein - Images**FGF-23, human recombinant protein - Background**

The FGF family plays a central role during prenatal development and postnatal growth and regeneration of a variety of tissues, by promoting cellular proliferation and differentiation. FGF-23, FGF-21 and FGF-19 constitute an atypical FGF subfamily whose ligands act as circulating hormones and require the participation of a Klotho protein as a co-receptor for their signaling. FGF-23 is a bone-derived hormone that acts in the kidney to regulate phosphate homeostasis and vitamin D metabolism. The signaling receptor for FGF-23, a Klotho-FGFR1 (IIIc) complex, is an essential regulator of the renal sodium phosphate co-transporter and key vitamin D-metabolizing enzymes CYP27B1 and CYP24A1. Recombinant human FGF-23 is a 22.5 kDa globular protein containing 228 amino acid residues.
