

Human CellExp Cathepsin S, human recombinant protein
Cathepsin S, CTSS
Catalog # PBV10902r**Specification****Human CellExp Cathepsin S, human recombinant protein - Product info**

Primary Accession	P25774
Concentration	0.2 μ M
Calculated MW	~ 37 kDa kDa

Human CellExp Cathepsin S, human recombinant protein - Additional Info

Gene ID	1520
Gene Symbol	CTSS
Other Names	
Cathepsin S, CTSS	
Gene Source	Human
Source	HEK 293 cells
Assay&Purity	SDS-PAGE; $\geq$ 95%
Assay2&Purity2	SEC-HPLC; $\geq$ 95%
Recombinant	Yes
Results	>1000 mU (1U = 1 μ mole/min/mg) .

Human CellExp Cathepsin S, human recombinant protein - Background

Cathepsin S (CTSS) is a lysosomal cysteine protease of the papain family and may participate in the degradation of antigenic proteins to peptides for presentation on MHC class II molecules. CTSS is synthesized as inactive precursor of 331 amino acids consisting of a 15-aa signal peptide, a propeptide of 99 aa, and a mature polypeptide of 217 aa. It is activated in the lysosomes by a proteolytic cleavage of the propeptide. The deduced amino acid sequence contains only one potential N-glycosylation site located in the propeptide. Compared with the abundant cathepsins B, L and H, cathepsin S shows a restricted tissue distribution, with highest levels in spleen, heart, and lung. In addition, evidences indicated that cathepsin S generates A beta from amyloidogenic fragments of beta APP in the endosomal/lysosomal compartment, and is implicated in the pathogenesis of Alzheimer's disease (AD) and Down Syndrome (DS).
