

Active Cathepsin S, human recombinant protein

CTSS

Catalog # PBV11138r

Specification

Active Cathepsin S, human recombinant protein - Product info

Primary Accession [P25774](#)
Calculated MW **23.9 kDa (115-331 aa) kDa**

Active Cathepsin S, human recombinant protein - Additional Info

Gene ID **1520**
Gene Symbol **CTSS**
Other Names
CTSS

Gene Source **Human**
Source **E. coli**
Assay&Purity **SDS-PAGE; ≥90%**
Assay2&Purity2 **N/A;**
Recombinant **Yes**
Results **>2000 mU/mg (1 U = Digestion of 1 μmole/min) of Ac-VVR-AFC substrate (K144-100).**

Target/Specificity
Cathepsin S

Application Notes
Reconstitute in 50 mM sodium acetate, 100 mM NaCl (pH 5.5) to 0.1-1 mg/ml

Format
Lyophilized

Storage
-80°C; Lyophilized from proprietary buffer.

Active Cathepsin S, human recombinant protein - Background

Cathepsin S (CTSS) is a lysosomal cysteine protease of the papain family and may participate in the degradation of antigenic proteins to peptides for presentation on MHC class II molecules. CTSS is synthesized as inactive precursor of 331 amino acids consisting of a 15-aa signal peptide, a propeptide of 99 aa, and a mature polypeptide of 217 aa. It is activated in the lysosomes by a proteolytic cleavage of the propeptide. The deduced amino acid sequence contains only one potential N-glycosylation site located in the propeptide. Compared with the abundant cathepsins B, L and H, cathepsin S shows a restricted tissue distribution, with highest levels in spleen, heart, and lung. In addition, evidences indicate that cathepsin S generates amyloid beta-peptide from amyloidogenic fragments of amyloid precursor protein (APP) in the endosomal/lysosomal compartment, and is implicated in the pathogenesis of Alzheimer's disease and Down Syndrome.
