Recombinant West Nile Virus Envelope Protein

Catalog # PBV11545r

Specification

Recombinant West Nile Virus Envelope Protein - Product info

Calculated MW	**12 kDa KDa**

Recombinant West Nile Virus Envelope Protein - Additional Info

Gene Source	**West Nile virus**
Source	**E. coli**
Assay&Purity	**SDS-PAGE;> 95%**
Recombinant	**Yes**

Target/Specificity
N/A

Format
Liquid

Storage
-20°C;In 20 mM Phosphate buffer pH 7.5

Recombinant West Nile Virus Envelope Protein - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

Recombinant West Nile Virus Envelope Protein - Images

Recombinant West Nile Virus Envelope Protein - Background

West Nile virus (WNV) is a virus of the family Flaviviridae part of the Japanese encephalitis (JE) antigenic complex of viruses. Image reconstructions and cryoelectron microscopy reveal a 45-50 nm virion covered with a relatively smooth protein surface. This structure is similar to virus; both belong to the genus flavivirus within the family Flaviviridae. WNV is a positive-sense, single strand of RNA, it is between 11,000 and 12,000 nucleotides long which encode seven non-structural proteins and three structural proteins. The RNA strand is held within a nucleocapsid formed from 12 kDa protein blocks; the capsid is contained within a host-derived membrane altered by two viral glycoproteins.
