Q-VD-OPH
Catalog # RTB10046

Specification

Q-VD-OPH - Product Information

Q-VD-OPH - Additional Information

Q-VD-OPH - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

Q-VD-OPH - Background

Q-VD-OPH is a cell permeable peptide which binds irreversibly to the catalytic site of intracellular enzymes known as caspases, which are critical for induction of cellular apoptosis. The binding of Q-VD-OPH to caspases inhibits the activity of these proteases, so that these peptide compounds are commonly used to inhibit the progression of apoptosis in vitro.
